Research + management

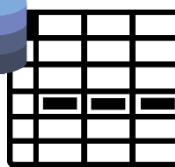

Delivery of care

Patient

CogStack

"The patient had a **severe rash** yesterday and has a **fever** today."

"The patient has a **family history** of **angina**"

Suspected Alzheimer's disease, **referred to memory clinic**"

Demographics

Prescriptions

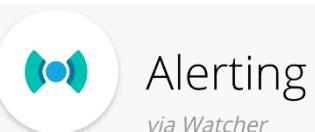

Lab results

Abnormal pathology results for rheumatology patients on Methotrexate

High-CCA antibodies suggesting pre-clinical Rheumatoid Arthritis

Patients being discharged on anticoagulants but not referred to Anticoagulation Clinic

Alerting

Research

UCLH

Guy's

SLaM
King's

King's College Hospital

- Most mature deployment
- 15 mins behind live record
- De-identification running in parallel with identifiable record
- 13M free text documents
- 300M observations
- **CRIS-style governance model under review to enable research**

SLaM

- Running now
- 30 mins behind live record
- Identifiable data only (i.e. delivery of care)

Clinical Applications

Objective	Areas	Data	Scale
Patient flow	Dynamic network	KCH	78,400 admissions
Automatic risk scores	CogStack, SemEHR, Knowledge Graph	KCH	10k patients 6.5 years
Prescribing patterns	CogStack	KCH	10k patients 6.5 years
Adverse drug reactions	ADEPt, Knowledge Graph	SLaM (CRIS)	260k patients
Kidney failure in ICU	SemEHR, Knowledge Graph	MIMIC-III UCLH	44k admissions
Blood cancer subtyping	NLP, Graph	KCH	100s patients

Heart Attack

Alive

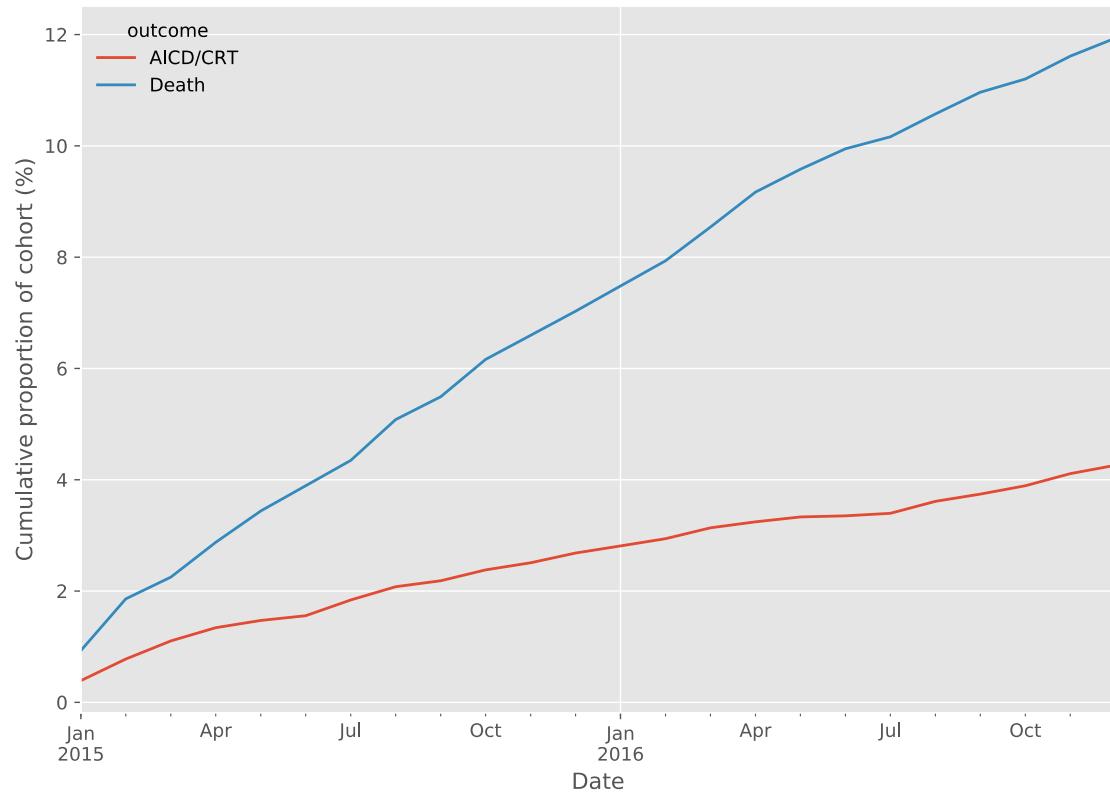

Dead

Audit example – Heart Failure

HF patients 2014-15
4625 patients

Follow up 2016/01– 2017/12
10,709 documents
12 with AICD implanted (0.26%)
187 with CRT implanted (4.04%)
552 died (11.27%)

Unstructured routine data to cohort
Total time: 3 hours

Atrial Fibrillation - Motivation

- Atrial Fibrillation (AF) is a heart condition causing an irregular heart rate
- Affects approx. 1m people in the UK
- AF patients have 5x higher stroke risk
 - AND stroke more likely to be fatal
 - 20% of strokes linked to AF
- Calculate stroke risk with CH₂DS₂-VASc score
- Stroke risk is effectively managed by oral anticoagulants (OAC)
- OAC known to be underutilized in primary care and research cohorts
 - No real idea of what's happening in secondary care

Atrial Fibrillation - Questions

- What proportion of AF patients are being prescribed an OAC
- Has that proportion been affected by the introduction of new drugs?
- What features are associated with prescribing?
- Could the proportion be improved somehow?
 - If the ~40% of AF patients not taking OAC are all contraindicated then there's no point pushing OAC prescribing

OAC Prescribing

Adult inpatients with AF
2011-01-01 – 2017-10-01

11,260

Gender code missing

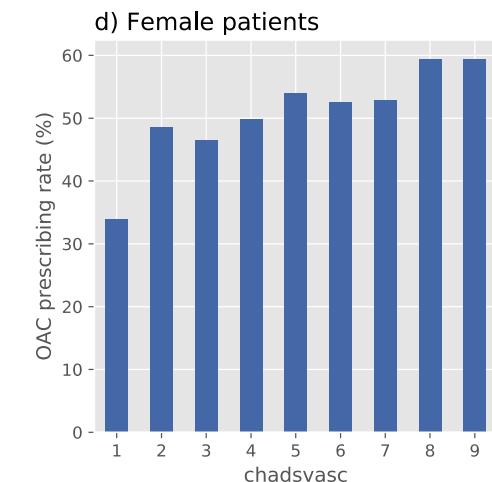

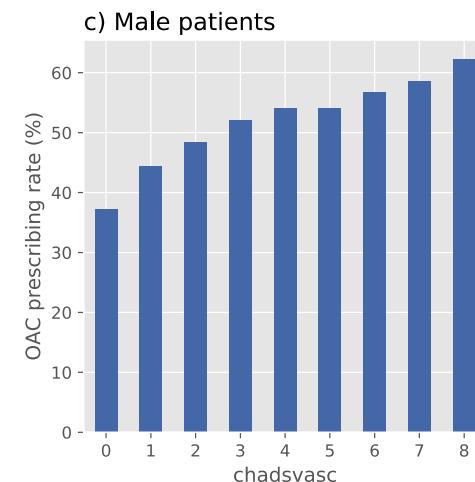

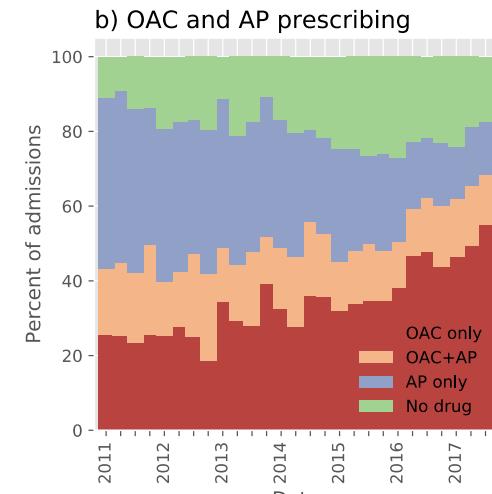

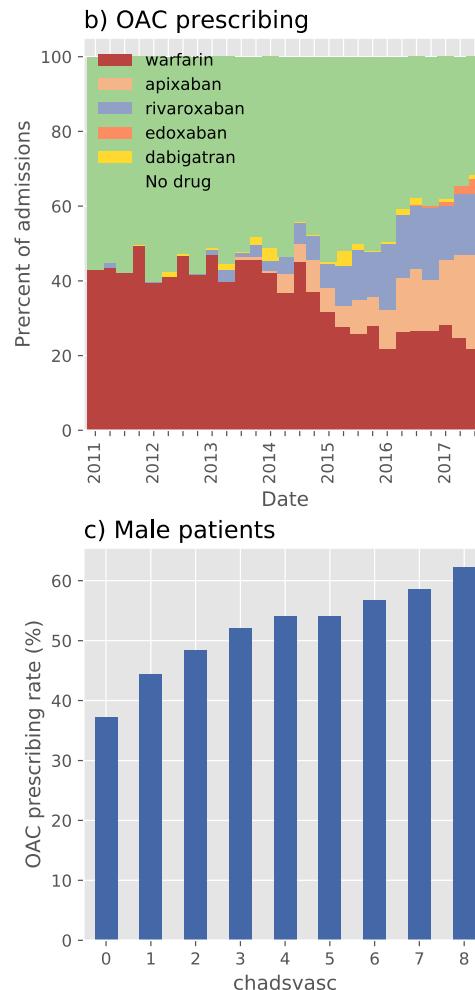

11,255

-392
Discharge ward
excluded or missing

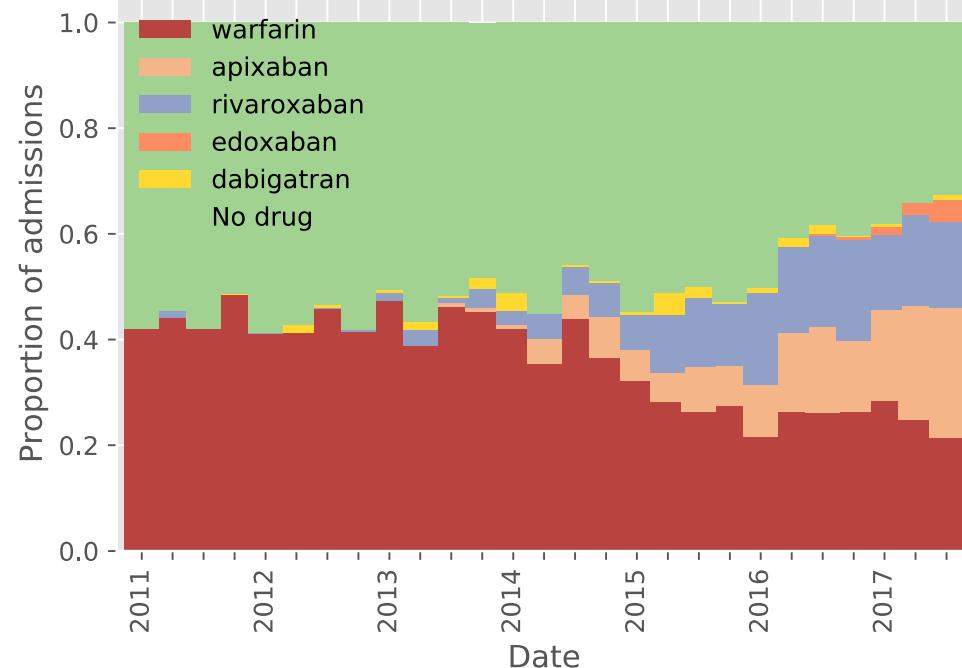

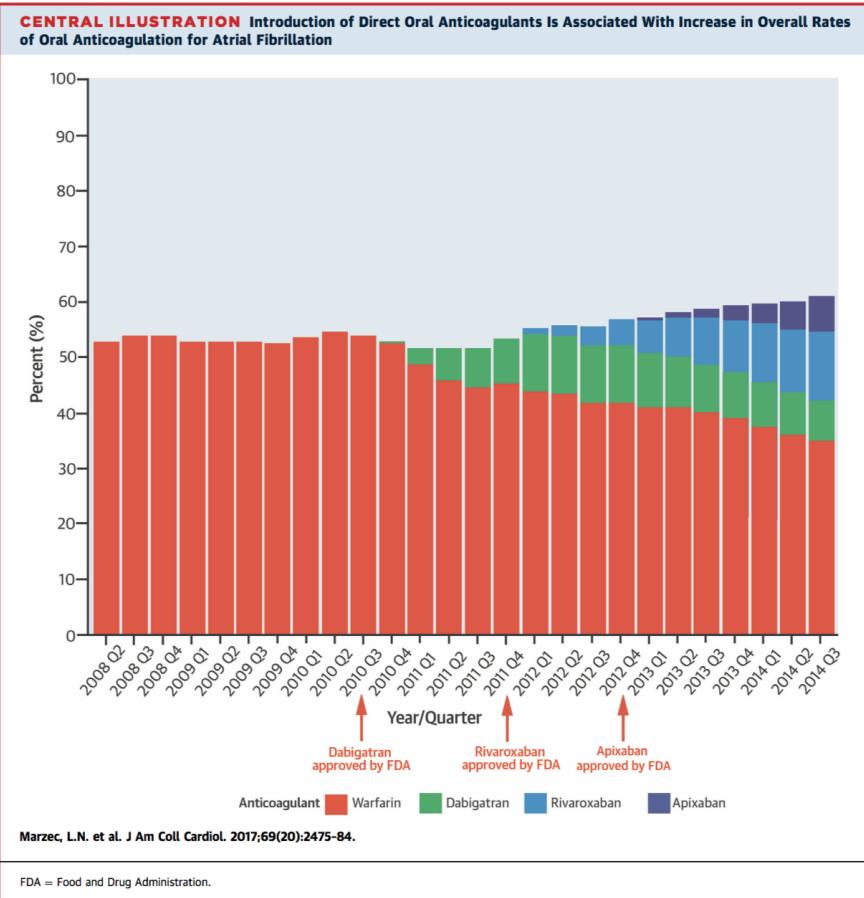

10,863

-833
No AF in NLP
output

Final cohort
10,030 patients
17,387 admissions

Routine vs. registry

KCH routine free text data
10,030 AF patients with CHA2DS2-VASc score > 1

Marzec et al. 2017

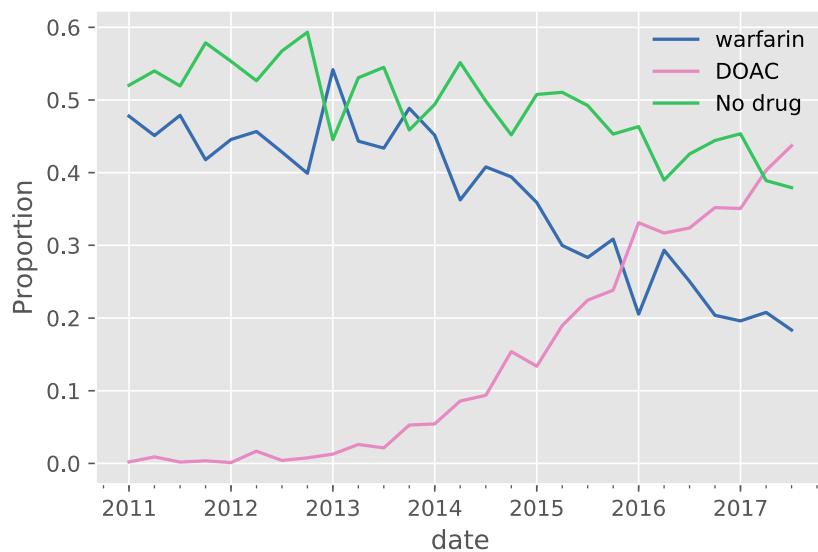

National Cardiovascular Data Registry PINNACLE registry

655,000 patients with nonvalvular AF and a CHA2DS2-VASc score of >1

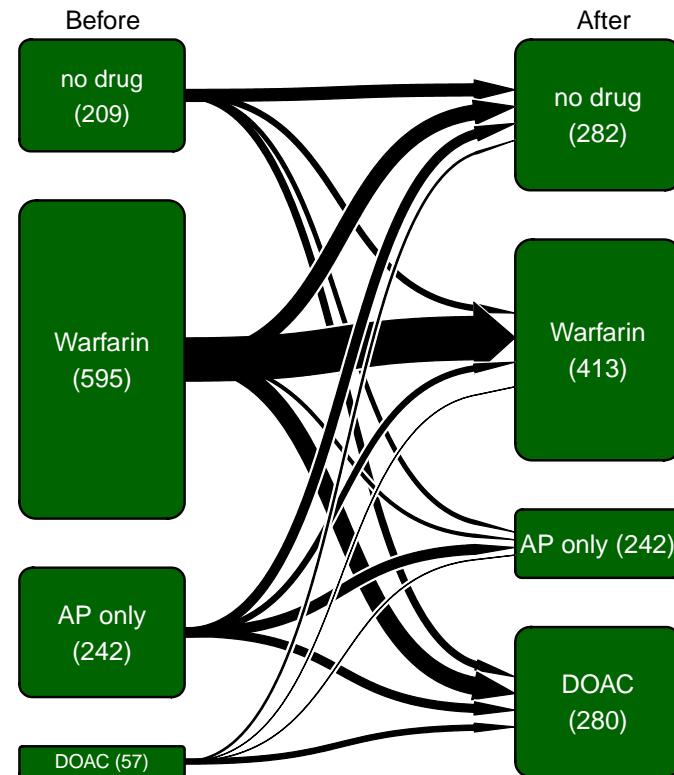

First medication

Updated 2014 NICE guidelines recommend DOAC over warfarin for stroke risk management in AF

First medication for new AF cases in KCH, 2011-2017

Medication switching for existing cases

Thanks
